SUMMARY

Generative AI Engineer with hands-on experience in architecting LLM powered applications, Retrieval-Augmented Generation (RAG) systems, and end-to-end AI solutions. Skilled in translating cutting edge AI research into scalable products that deliver measurable value in real world environments.

WORK EXPERIENCE

Associate Software Engineer - VistawaysTech

July 2026- Present

- Developed AI powered conversational applications using Azure OpenAI GPT models and Python to deliver intelligent, context aware user experiences.
- Built enterprise grade Retrieval-Augmented Generation (RAG) systems by integrating Azure AI Search, vector databases, and organizational knowledge sources.
- Designed document ingestion and processing pipelines using Azure Document Intelligence and Blob Storage for efficient knowledge extraction and indexing.
- Implemented semantic search, embedding generation, and knowledge-grounding techniques to improve response accuracy and reduce hallucinations.
- Collaborated on deploying scalable AI solutions across Azure services while ensuring performance, security, and reliability.

Machine Learning Intern - Unified Mentors Pvt. Ltd.

Mar 2026 - Jun 2026

- Developed and optimized machine learning models for predictive analytics using Python, Pandas, NumPy, and Scikit-learn.
- Built an AI powered Restaurant Assistant using LangChain and LLMs to answer business queries from restaurant sales data through natural language interactions.
- Designed ETL pipelines for data cleaning, preprocessing, and transformation to ensure data quality and accurate business analysis.
- Implemented RAG-based retrieval mechanisms and vector search techniques to improve contextual response generation and information retrieval.
- Performed model evaluation, performance optimization, and data visualization to deliver actionable insights from business data.

PROJECTS

LUDO Bot - Enterprise GenAI Assistant

- Developed an AI-powered conversational assistant using Azure OpenAI GPT models and Python.
- Built Retrieval-Augmented Generation (RAG) pipelines integrating Azure AI Search and vector databases.
- Implemented document ingestion and processing workflows using Azure Document Intelligence and Blob Storage.
- Designed semantic search and embedding-based retrieval mechanisms for context-aware responses.
- Leveraged Azure services to deliver scalable, secure, and enterprise-ready AI solutions.

Restaurant AI Assistant

- Built an AI assistant capable of answering restaurant business queries using natural language.
- Integrated LangChain and LLMs to generate insights from restaurant sales data.
- Developed ETL pipelines for data cleaning, preprocessing, and transformation.
- Implemented retrieval-based techniques to improve contextual understanding and response quality.
- Enabled data-driven decision making through automated analytics and intelligent querying.

EDUCATION

Bachelor Of Technology at JNTUH UNIVERISTY	(2018-2022)
Intermediate at Alphores college	(2016-2018)

SKILLS

Programming Languages	Python, Java
Technologies	Machine Learning, Deep Learning, Natural Language Processing, Generative AI, Agentic AI, RAG, LLMs, Prompt Engineering
Libraries & Frameworks	Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, LangChain, LangGraph
Cloud & AI Services	Azure OpenAI, Azure AI Search, Azure Document Intelligence, Azure Blob Storage
Tools	Git, Docker, CI/CD, Kubernetes (Basic), Tableau, VS Code, REST APIs
Databases	SQL, FastApi, Vector Databases
Soft Skills	Problem Solving, Analytical Thinking, Team Collaboration, Communication
